

SUBHAM RAY

Full Stack Developer | Generative AI Engineer

subhamray865@gmail.com | +91 7439563461 | [Portfolio](#) | [GitHub](#) | [LinkedIn](#)

PROFESSIONAL SUMMARY

Full Stack Developer and Generative AI Engineer with hands on experience building production ready web applications and AI powered platforms using React.js, Node.js, Express.js, and MongoDB. Skilled in integrating Large Language Models (LLMs), LangChain workflows, Retrieval Augmented Generation (RAG), vector search, and real time communication systems. Proven ability to design scalable, multi tenant architectures and deliver measurable performance and automation improvements.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript

Frontend: React.js, HTML5, CSS3, Tailwind CSS, SCSS

Backend: Node.js, Express.js, REST APIs, JWT Authentication

Databases: MongoDB, Pinecone Vector Database

Generative AI: LangChain, LLM Integration, Prompt Engineering, RAG, AI Agents, Vector Search

DevOps & Cloud: Docker, Kubernetes, Git, GitHub, AWS (Basics)

EXPERIENCE

Frontend Developer Intern, AskMeldentity (Remote)

3 Month Internship

- Improved page load time by 30% by implementing lazy loading and code splitting across React.js features.
- Built reusable React.js components that raised code reusability to 20 to 25% across the codebase, reducing duplicate development effort.
- Collaborated with product managers and designers to translate design specifications into responsive, pixel perfect interfaces.
- Participated in debugging, feature iterations, and code reviews, maintaining clean and maintainable code standards.

PROJECTS

SupportDesk: Multi Tenant AI Customer Support Platform ([Live Demo](#))

React.js, Node.js, Express.js, MongoDB, Pinecone, Mistral AI, LangChain

- Built a multi tenant AI powered support platform resolving 80% of customer queries automatically without human intervention, using a RAG pipeline with Pinecone Vector Database and the Mistral LLM.
- Maintained an average AI response latency of 5 to 10 seconds across real time chat interactions.
- Designed a tool executor that lets the AI call each tenant's own APIs (for example order tracking) before escalating, and routes unresolved queries to human agents based on live agent load.
- Engineered an embeddable chat widget deployable on any website with a single script tag, backed by a fully isolated, per tenant data architecture with role based access control.
- Built secure JWT based authentication, an admin dashboard for agent and knowledge base management, and PDF ingestion into a per tenant knowledge base.

Perplexity: AI Powered Real Time Chat Application

React.js, Node.js, MongoDB, Socket.IO, LangChain, Gemini, Mistral

- Developed a full stack AI chat platform supporting multiple Large Language Models through LangChain orchestration.
- Integrated Socket.IO for real time messaging and streaming AI responses, with search augmented generation using the Tavily Search API.
- Built secure JWT based authentication, persistent chat history, and multi session conversation management.

EDUCATION

Bachelor of Technology (B.Tech), Computer Science and Engineering

Academy of Technology (AOT) | 2024 to 2028
